ABSTRACT

A film for hydraulic transfer having a supporting film formed from a water-soluble or water-swelling resin, and a transfer layer that is soluble in organic solvent provided on top of the supporting film, in which the transfer layer includes a curable resin layer that is curable by irradiation with an active energy beam, and a decorative layer composed of an ink or a coating film, wherein the curable resin layer is non-adhesive at room temperature, and contains: 1) a non-polymerizable thermoplastic resin (A), and, 2) a radical polymerizable oligomer (B1), having a weight average molecularweight within a range from 700 to 3,000 and being compatible with the non-polymerizable thermoplastic resin (A).
